

Bullock®, security that's tried and tested!

**Auto
EXPRESS**

COMPARISON TEST OF MAJOR EUROPEAN CAR THEFT PREVENTION DEVICES FOR RESISTANCE TO DISENGAGEMENT AND REMOVAL!

**Auto
EXPRESS**

PERFORMED AND PUBLISHED IN ENGLAND BY "AUTOEXPRESS", THE AUTHORITATIVE CAR MAGAZINE.

The test was carried out by two "thieves" in daylight, without limits on noise and with tools that are readily available. In the real world, it would be too hard for a single thief working "undercover" to disengage the best anti-theft devices.

WINS **BULLOCK®** CAR ANTI-THEFT SYSTEM

WITH 17 MINUTES, 5 SECONDS OF RESISTANCE TO REMOVAL AS COMPARED WITH THE AVERAGE OF 2 MINUTES, 10 SECONDS FOR THE OTHER ANTI-THEFT DEVICES!

BULLOCK
Removal time:
7 minutes 5 seconds

Score: ★★★★★
Remarkably well-built, Bullock withstood powerful, prolonged attack without even moving. Besides being easy to use and competitively priced, Bullock has the superior strength that made it the deserving winner. It's only drawback is that it's hard to see, so it doesn't not earn points as a deterrent.

"WILKA ELEPHANT" STEERING WHEEL BAR
Removal time:
9 seconds

Score: ★★★★★
Its colour is its only real deterrent. Too easy to break.

AUTOLOK PROTECTOR
Removal time:
5 seconds

Score: ★★★★★
It looks strong, but was removed in 5 seconds.

DISKLOK MkII
Removal time:
4 minutes 20 seconds

Score: ★★★★★
Awkward blows and lots of noise were needed to remove it.

POLCO BLOCKLOCK
Removal time:
4 seconds

Score: ★★★★★
It's cheap, but took only 4 seconds to remove.

HALFORDS STEERING WHEEL BAR
Removal time:
11 minutes 54 seconds

Score: ★★★★★
It doesn't protect the centre of the wheel, but did stay in place.

AUTO TASER
Removal time:
14 seconds

Score: ★★★★★
Sparkling electrodes and a siren are extra deterrents, but not enough.

AUTOLOK 2000
Removal time:
5 minutes 24 seconds

Score: ★★★★★
Much improved, but a bit clumsy to install.

LINWOOD TOPLOCK
Removal time:
9 seconds

Score: ★★★★★
Thieves can attack and open it in countless ways.

METRO STOPLOCK LED
Removal time:
1 minute 06 seconds

Score: ★★★★★
Pricey, but a good deterrent.

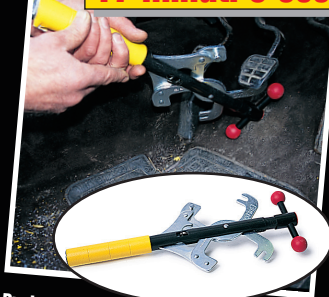

METRO STOPLOCK PRO
Removal time:
3 minutes

Score: ★★★★★
Although approved by Thatcham, this anti-theft device was quickly defeated.

EXCERPTED FROM AUTOEXPRESS MAGAZINE WITH KIND PERMISSION OF THE PUBLISHER - TEST PERFORMED AND PUBLISHED IN MARCH '98

Tempo di scasso:
17 minuti 5 secondi

Punteggio:

Estremamente ben fatto, il Bullock® ha resistito ad attacchi massicci e prolungati senza muoversi. La sua resistenza, oltre alla facilità d'uso ed al prezzo competitivo, lo rendono un degno vincitore. Il suo principale punto negativo è che è difficile da vedere, così prende pochi punti sul valore deterrente.

From comparative tests on resistance to removal and deactivation, on the best mechanical alarms for cars available on the Italian and European market, carried out by the most influential trade magazine, **BULLOCK®** proves to have the greatest capacity for resistance to theft!

BULLOCK®: tried, tested and certified.
